

Chapter 3 Establishing a Network

Overview

A network can be set up as an arrangement of providers. The FACETS network application allows you to

- maintain information about a provider network including the address and any provider groups assigned to that network
Note: The network must already be established in this application before it can be linked to a provider record.
- link networks together, for reporting purposes only (e.g., a national drug/pharmacy chain)
- define a network by geographic region based on zip code ranges, for reporting purposes only
Note: Defining networks is used to gather information such as marketing demographics.

Procedure – Setting Up a Network

STEP	ACTION
1.	Assign the network ID: <ul style="list-style-type: none">• open the Network application• assign the ID to the new network in the New dialog box
